Penn Medicine’s Department of Pathology and Laboratory Medicine is one of the leading, fully integrated academic departments and is organized into a number of clinical divisions: Anatomic Pathology, Neuropathology, Laboratory Medicine, Transfusion Medicine and Therapeutic Pathology, Hematopathology, Precision and Computational Diagnostics, Pediatric Pathology and its basic science division, Experimental Pathology and Immunobiology.

Why Penn Pathology?
- Efficient turnaround time, 24 hours in most cases
- Subspecialty expertise
- Designated accessioner and system
- Individual fellows or faculty members as case managers
- Frequent same-day review
- Account billing
- Multi-disciplinary Daily Consensus Conference

How It Works
- Efficiency: Cases have their own accession code, specific forms and uniform charge.
- Provide individualized service: Consult cases will be accessioned into our computer system and the sender will receive a communication that the case was received.
- Reliable communications: Cases reviewed by a Fellow with the specific faculty person on that subspecialty service.
- Fast results: If uncomplicated, a diagnosis will be rendered and communicated back to the sender immediately afterward; utmost efforts will be exerted to strive for a 24 hour turnaround time whenever possible.
- Full personalized workup: Cases that require additional studies will be reported out in a timely fashion.

SETTING UP AN ACCOUNT
A specific client account is set up to facilitate billing. Charges would be as a set fee for an uncomplicated case. Those wishing to send Personal Consults to any specific faculty member should do so through the usual route addressed to that individual faculty member.
